Please do not waiver from the end result of protecting and helping the true victims. Owners of MS operating systems and software. We are still in the dark and are still unable to use our systems and competitor software. We are the victims, we've spent the money and we have spent the countless hours seeking help and information.

Any allowance of Microsoft to utilize this "settlement" to product a new market "niche" in the education systems does not seem fair and does not attack the real problem.

As an owner of a HP computer with a MS Windows ME operating systems, I can tell you that neither are supported by their manufacturers and that MS has "auto-updated" many things without offering support, and has resulted in loss of support from HP.

Thank You
